

Project Summary — WFP Kano Food Security Dashboard

Project Type: Humanitarian Analytics / Power BI Dashboard

Tools Used: Python, Excel, Power BI, DAX

Location: Kano State, Nigeria

Overview

This project simulates a real-world food security monitoring system inspired by the World Food Programme (WFP). It analyzes household vulnerability, hunger severity, and food market inflation across selected LGAs in Kano State.

Objectives

- Monitor household food security indicators
- Identify hunger hotspots
- Track food price inflation
- Support data-driven humanitarian intervention

Dataset

Synthetic WFP-style dataset with 3,000+ household records including: Household demographics, income, FCS, rCSI, hunger classification, and market prices.

Dashboard Pages

1. Executive Summary
2. Food Risk Analysis
3. Market Monitoring
4. Insights & Recommendations

Key Insights

- Rural LGAs showed higher hunger vulnerability than urban LGAs.
- Low-income households with large family sizes faced severe food stress.
- Rising rice and millet prices reduced purchasing power.
- IDP households demonstrated lower Food Consumption Scores.

Business Impact

The dashboard enables humanitarian agencies to prioritize high-risk areas, optimize aid allocation, and improve reporting efficiency.
