

WFP Kano State Food Security Dashboard

Monitoring Hunger, Vulnerability & Market Conditions

Presented by: Umar Musa Isah
Data Analyst | Excel | SQL | Power BI | Python

Problem Statement

Food insecurity remains a major humanitarian challenge across vulnerable communities due to rising inflation, unstable income, and household economic stress.

Humanitarian organizations need timely and accurate analytics to identify high-risk populations and prioritize intervention effectively.

Project Objectives

Monitor Food Security Indicators

Identify Hunger Hotspots

Track Food Price Inflation

Support Humanitarian Intervention

Dataset Overview

•3,000+ Records

•15 LGAs

•14 Features

•2 Data Sources

HH_ID	LGA	Monthly_Income	FCS	rCSI	Hunger_Level
-------	-----	----------------	-----	------	--------------

Synthetic WFP-style dataset generated using Python and cleaned using Excel for Power BI analytics.

Dashboard Overview

Dashboard Pages:

1.Executive Summary

2.Food Risk Analysis

3.Market Monitoring

4.Insights & Recommendations

Key Insights

Rural LGAs showed higher hunger vulnerability.

Large households (8+) faced severe food stress.

Food inflation reduced purchasing power.

Low FCS strongly correlated with high rCSI.

Recommendations

Prioritize high-risk LGAs for emergency intervention.

Strengthen food market monitoring systems.

Expand targeted assistance for vulnerable households.

Thank You
